

Eruva Akhil

0481 700 248 | Adelaide, SA

akkuai7485@gmail.com | linkedin.com/in/eruva-akhil | github.com/Akhil-811

PROFESSIONAL PROFILE

AI, data, and computer science professional with a Bachelor of Technology in Artificial Intelligence and Machine Learning completed in 2025 and current postgraduate study at Adelaide University. Practical experience spans AI evaluation, data analytics, machine learning, Python application development, frontend and data engineering, REST API integration, database systems, embedded and IoT solutions, and technical communication. Uses Python, R, SQL, JavaScript, and modern ML and software tools to analyse problems, build and test reliable solutions, and communicate findings. Published researcher and former teaching assistant and mentor with strengths in quality assurance, documentation, troubleshooting, collaboration, and independent delivery.

EDUCATION & QUALIFICATIONS

Master of Artificial Intelligence and Machine Learning – Adelaide University *Feb 2026–Nov 2027 (Expected)*

- Relevant coursework: Programming for Artificial Intelligence; Statistical Foundations for Data Science and AI; Ethics, Privacy and Security in AI and ML; Project Management for IT Professionals

Bachelor of Technology in Artificial Intelligence and Machine Learning – Vardhaman College of Engineering, JNTU Hyderabad *2021–2025*

- Relevant coursework: Machine Learning; Deep Learning; Natural Language Processing; Data Analytics; Big Data Analytics; Database Management Systems; Cloud Computing
- CGPA: 8.19/10, First Class

KEY SKILLS

- **Programming and data:** Python, R, SQL, JavaScript, Pandas, NumPy, Matplotlib, MySQL, PostgreSQL; foundations in Java and C
- **Artificial intelligence and machine learning:** Scikit-learn, TensorFlow, PyTorch, Keras, XGBoost, supervised learning, deep learning, NLP, computer vision, recommendation systems, explainable AI
- **Data science and model evaluation:** Exploratory analysis, data cleaning, missing-value handling, feature engineering, validation, metric selection, data-leakage detection, overfitting diagnosis, hyperparameter optimisation, class-imbalance handling
- **Software engineering and systems:** React.js, Django, REST APIs, Streamlit, application integration, testing, debugging, performance optimisation, Git, GitHub, cloud-computing foundations
- **AI evaluation and responsible technology:** Prompt analysis, response ranking, fact-checking, instruction-following assessment, rubric adherence, reviewer feedback, privacy and security foundations
- **Embedded and IoT systems:** ESP32, microcontroller programming, IoT integration, embedded hardware, sensing, real-time location tracking

PROFESSIONAL EXPERIENCE

Generalist Expert (AI Contractor) *Jul 2026–Present*
Mercor

- Evaluate and rank AI-generated responses through prompt analysis, comparison, fact-checking, instruction-following assessment, and structured quality review.
- Identify factual, logical, and reasoning weaknesses and provide precise, evidence-based feedback against detailed evaluation criteria.
- Complete independent assignments consistently while incorporating reviewer feedback, adapting to changing requirements, and meeting deadlines.

Data Engineer and Frontend Developer *Oct 2024–May 2025*
Enerze.in

- Developed responsive React.js interfaces and reusable components for a battery e-commerce platform, including product listings, persistent cart, and secure checkout workflows.
- Supported data and backend integration, testing, debugging, performance optimisation, and Git-based delivery to improve system reliability and user experience.

PROFESSIONAL EXPERIENCE (CONTINUED)

Python Developer Intern

Oct 2024–Dec 2024

Infosys Springboard

- Developed an AI-powered food and nutrition application combining image-based meal recognition, nutritional analysis, and accessible user reporting.
- Prepared and validated data, integrated model predictions, tested end-to-end behaviour, and refined model-driven outputs.

Microcontroller Programmer

Nov 2023–Jun 2024

GFR Robots

- Developed an ESP32-based safety smartwatch with autonomous SOS activation, evidence collection, and real-time location tracking through IoT and embedded-hardware integration.

Teaching Assistant

2023–2024

Department of AIML, Vardhaman College of Engineering

- Explained machine-learning concepts, delivered practical demonstrations, supported troubleshooting, and translated complex algorithms into accessible guidance for students with varied experience levels.

Machine Learning Intern

Sep 2023–Oct 2023

Cognifyz

- Developed restaurant rating-prediction and recommendation models through data cleaning, feature engineering, comparative evaluation, result interpretation, and reproducible documentation.

Artificial Intelligence Intern

May 2022–Jul 2022

Rinex Technology

- Developed sentiment-analysis and text-classification pipelines using NLP preprocessing, neural networks, and supervised learning techniques.

LEADERSHIP & UNIVERSITY INVOLVEMENT

Student Mentor

2021–2025

Department of AIML, Vardhaman College of Engineering

- Mentored students across four academic years, adapting guidance to varied technical backgrounds and AI, machine-learning, and NLP project needs.

Student Program Coordinator

2021–2023

Department of AIML, Vardhaman College of Engineering

- Coordinated workshops, expert sessions, coding contests, project expos, seminars, and training activities by communicating requirements and managing competing priorities.

SELECTED AI, DATA & SOFTWARE PROJECTS

- **Heart Disease Prediction:** Compared SVM, XGBoost, Random Forest, and Logistic Regression using feature selection, hyperparameter tuning, validation, and performance metrics.
- **Credit Card Fraud Detection:** Prepared imbalanced transaction data, engineered features, evaluated classification models, and selected metrics appropriate for reliable fraud identification.
- **Restaurant Analytics Platform:** Built rating-prediction, recommendation, and CNN-based cuisine-classification workflows through data transformation, model comparison, and result interpretation.
- **Bone Fracture Detection:** Developed and deployed an explainable X-ray classification system using Vision Transformer and Swin Transformer architectures with Grad-CAM.

RESEARCH & PROFESSIONAL DEVELOPMENT

- Co-authored four AI and machine-learning publications covering computer vision, IoT health monitoring, sentiment analysis, and sustainable agriculture.
- Microsoft Certified: Azure AI Fundamentals; Certified Full Stack Developer, Wipro and Infosys Springboard; AI/ML for Geodata Analysis, ISRO
- NPTEL Python for Data Science, Database Management Systems, and Machine Learning and Deep Learning; Introduction to Programming in C, Silver Medal, IIT Kanpur; HackerRank R, Python, SQL, and Problem Solving
